CTRM : UI/UX

Terminologies:

| Interface A1 | Frame 01 | Frame 02 | Frame 03 |

**View** *(at once for user)*

Interface A1 : Tree View / Data Grid

All details in Tree view / Data Grid for fast editing. ***Clicking on fields*** should give option to edit cell, while ***Clicking on Contract*** name/title, Trade name/Title or Sell Name/Title should open it in Interactive View (Interface 02).

Sample:

Interface A2 : Hub Navigation

Interface to initiate, enter, edit & capture data in interactive view. View slide will be horizontally (like of Foxena.com).
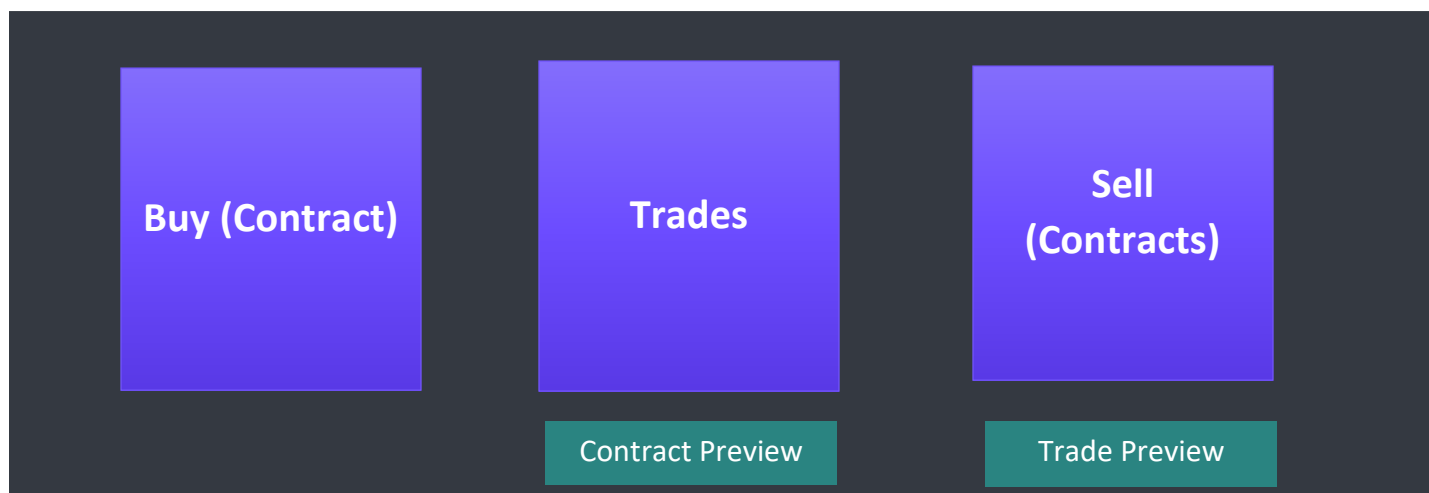

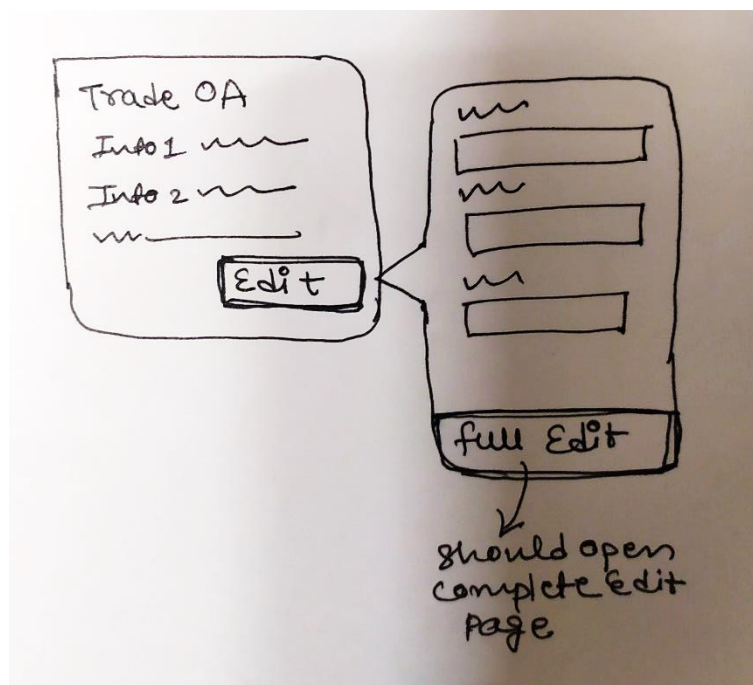

Frame 01 – Buy (Contract)

We will test sidebar approaches for uploading & opening files.

Frame 02 – Trades

We will be using Grid system with fast pop-up on hovering on Edit Button & Clicking on Edit Button should take to complete field entering view like of Frame 01. The sample of a single grid is given below:

Frame 03 – Sells (Contracts)

In Sell view we can use Master Details view (like of outlook) so that if there are more number of sells per trade eg. 100, so everything should come as outlook mail format i.e. Master Details View Format. Semantic Zoom & LIst View are exciting approaches too but with too many fields, things can be confusing in such approaches.
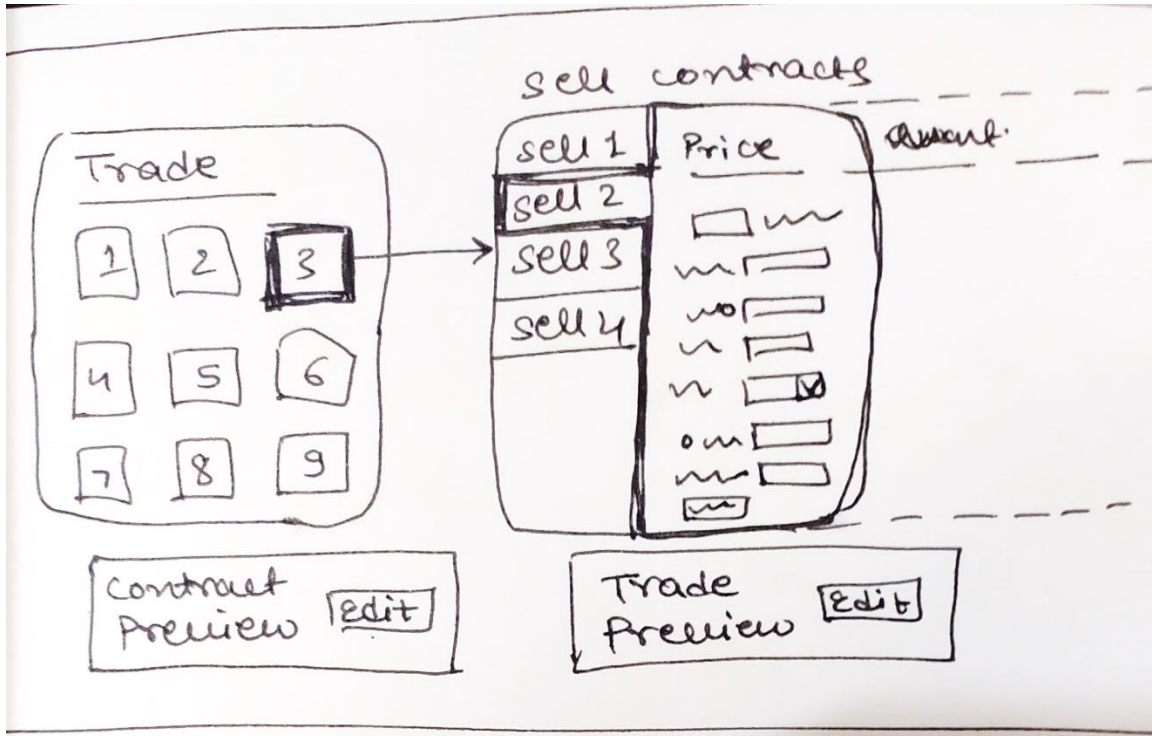

Every Master Details view will then have Pivot navigation for editing Sections like Prices, Quantities & more. This will give proper focus on what they are editing, while having a preview of another sells & Trade Preview slide in bottom. Here also we can test the sidebar approach as of Frame 01 to upload & View files.
